

OBJECT OF THE MONTH

DYNAFIT SPEED FACTORY, KIEFERSFELDEN

Dynafit has opened the “Speed Factory” at the northern gateway to the Alps. The modern building combines workplaces for more than 100 employees with an experience center for mountain sports enthusiasts.

Sustainability played a central role in the planning process: an innovative climate concept, a heat pump powered by the building’s own solar system, and a sophisticated shading system make the building largely CO2-neutral.

Two all-in-one ventilation units from PICHLER with integrated heat pumps ensure a pleasant and efficient indoor climate. The units combine several functions in a single system: ventilation, heating, cooling, as well as humidity and heat recovery. This not only guarantees a high level of comfort for employees and visitors, but also supports resource-efficient building operation.

The project impressively demonstrates how modern ventilation and air-conditioning technology can make an important contribution to sustainable building concepts — efficient, compact, and future-oriented.

DATA & FACTS

Location:	Kiefersfelden
Completion:	2024
Type of building:	office building
Builder:	Oberalp Group
Architect:	Barozzi Veiga
Building technology:	Trenkwalder GmbH
Products:	Ventilation units with integrated heat pump, air outlets, silencers, spiral ducts

Product groups:
