KINDERGARTEN, FELDKIRCHEN BEI GRAZ

The new Kindergarten in Feldkirchen bei Graz that is run by WIKI opened its gates in September 2020. It accommodates two kindergarten groups and one crèche. However, with its final completion, the design of the new building will provide space for a total of up to seven groups.

Although the building is accessed from the road, in the entire complex of buildings children and kindergarten teachers are not bothered by the noise of passing cars. Since the slope was optimally utilised, there is a wonderful view into the countryside. The energy-efficient ventilation unit with an integrated heat pump not only provides for fresh and clear air but also heats and cools the interior spaces.

The building was designed in concrete construction with vertical timber formwork and extends across three floors. By the way, the construction of the new building was preceded by an architectural competition. The concept, designed by the architect couple from Hausmannstätten, Mr Christoph Schmölzer and his wife Ms Berit Schmölzer, who have created a successful total work of art in a somewhat complex construction situation, also convinces after its completion.

DATA & FACTS

Location: Feldkirchen bei Graz

Completion: 2020

Type of building: Kindergarten

Architect: Architectural office Schmölzer

Building technology: Karl Reisenhofer GmbH

Products: ventilation unit with integrated heat pump, swirl diffusers, ventilation grilles, ducts & fittings, weather protection grilles

Product groups:
