

OBJECT OF THE MONTH

WINERY AIGNER

All signs point to growth in Gumpoldskirchen. Winery Aigner inaugurated its new, state-of-the-art production and storage facilities in time for the 2025 harvest. The company now has a tank farm with a capacity of 12 million litres and a finished goods warehouse for more than 3 million bottles, opening a new chapter in terms of security of supply and delivery capacity.

Despite the comparatively small structural footprint, the newly created roof area has been optimally utilised. The existing photovoltaic system was extended by around 150%. At the same time, the LG 2500 central ventilation unit in a weatherproof design was installed on the roof. With an air flow rate of up to 2.300 m³/h, the LG 2500 reliably provides fresh, clean air in the tasting room of the winery.

The combination of extended solar energy utilisation and state-of-the-art ventilation technology exemplifies the interplay of sustainability, functionality and architectural integration.

DATA & FACTS

Location:	Gumpoldskirchen
Completion:	2025
Type of building:	Production & storage halls
Builder:	Weinkellerei Aigner GmbH
Building technology:	Neukam Kruisz GmbH
Products:	LG 2500 central ventilation unit in weatherproof design + ventilation grilles
